Joint Committee on Tactical Shelters (JOCOTAS) Brochure
In accordance with Department of Defense (DoD) policy as stated in AR 70-59, OPNAVINST 3900.27, AFJI 61-106, and MCO 3920.5A, the services through the Joint Committee on Tactical Shelters (JOCSOTAS) has approved a Standard Family of Tactical Shelters.

The shelters contained in this brochure are the only shelters authorized for military use.

This brochure contains information on the Department of Defense (DoD) Standard Family of Tactical Shelters. The standard rigid wall, soft wall, and hybrid shelters shown in this brochure have been approved by the Joint Committee on Tactical Shelters (JOCOTAS) for Department of Defense (DoD) use.

JOCOTAS was formed in 1975 under Office of the Secretary of Defense (OSD) direction with the purpose to:

- Prevent the duplication of Tactical Shelter Research and Development.
- Eliminate the proliferation of non-standard tactical shelters in the DoD inventory.
- Maximize the usage of DoD Standard Family of Tactical Shelters.

Prior to the formation of JOCOTAS, 100+ rigid wall tactical shelter types existed among the Four Services which created a huge logistics burden for shelters. JOCOTAS has succeeded in reducing the standard family of rigid wall tactical shelters to 17 shelter types among the Four Services. Soft wall and hybrid shelters were added to JOCOTAS in 1995. JOCOTAS consists of two technical working groups (TWGs), Rigid Wall/Hybrid TWG and Soft Wall TWG, that meet three times per year and principal/voting Service members that meet annually. Office of the Under Secretary of Defense (Acquisition & Technology), OUSD (A&T), has approval authority for JOCOTAS.

Shelters developed by the Army, Air Force, Navy and Marine Corps are usable by more than one Service and make up the JOCOTAS approved DoD Standard Family of Tactical Shelters. The standard shelters contained in this brochure can be used by all Services. New requirements and technology advancements will likely result in additional shelters being added by JOCOTAS to the existing Standard Family of Tactical Shelters Listing.
**Tactical Shelter** - A highly mobile, transportable structure designed for a functional requirement that provides a live-in and/or work-in capability. These structures can be:

a) **Rigid Wall shelters** which are presized structures (non-expandable and expandable shelters) that are transportable by land, sea, or air. These shelters require minimal site preparation and no specialized set-up.

b) **Soft wall shelters** which include air supported and prefabricated structures, that are transported and then erected or assembled on site.

c) **Hybrid shelters** which are a combination of rigid and soft wall shelters that are transported and erected or assembled on site.

Structures not considered tactical shelters and outside the scope of the DoD Standard Family of Tactical Shelters are:

a) Containers used exclusively for cargo transportation (e.g., milvans, conex containers).

b) Refrigerated structures.

c) Modular or prefabricated structures designed to be shipped to the operating location and assembled with external unit support.

d) Vans.

**Joint Committee on Tactical Shelters (JOCOTAS)** - A committee consisting of representatives from Army, Air Force, Navy, and Marine Corps that:

- Eliminates duplication of research and development by annual submission and DoD approval of a 5-year DoD Tactical Shelter Research and Development program.

- Encourages maximum use of the DOD standard family of shelters.

- Provides a forum for technical interchange via Joint Working Group Meetings.

**Tactical Shelter Family** Means:

- Maximum Standardization for DoD shelters and continue to meet the needs of the Services.

- Rapid Worldwide Deployment of a tactical force featuring ISO (International Organization for Standardization) handling, structural and dimensional standards, where applicable, for container vessel shipment.

- Lower Long Term Deployment Costs by recovering deployed structures for future uses, eliminating wasted dollars on permanent construction which is later abandoned.

- Rugged Qualified Shelters that stand up to rough use in the field and climates all over the world.
This list has been approved by the Joint Committee on Tactical Shelters (JOCOTAS). Based on the recommendations of the JOCOTAS group, this list may have future additions or deletions.

Shelter Transportability

Transportability and deployment are two main advantages of using DoD Standard Family Shelters. DoD Standard Family Shelters can be transported by land, air, or sea and deployed quickly.

Standard shelters are transportable using military/commercial trucks, railcars, container ships, dolly sets/mobilizers, helicopters, and military cargo aircraft. Standard shelters are rapidly and easily erectable on site with no specialized equipment/tools and minimal, if any, site preparation.

A wide variety of complexing arrangements can be made using standard shelters. Joining corridors/passageways/bootwalls are available to connect basic shelters units to other basic shelter units and tents.

Shelter System Configurations

Some of the system configurations that are possible using standard shelters include command posts, field hospitals, dental facilities, supply depots, maintenance support facilities, food services field feeding systems, administrative/billeting quarters, and logistic support. Shelters can also double as shipping containers for equipment and/or systems used within. Below are some typical system configurations using standard shelters:
